Inside SilverStone: The Science of the Stone

What is a Wellness Kitchen

Made entirely from patented sanitised stone — 0% wood. No trees cut, no formaldehyde released. Contains real silver and copper nano-particles — naturally anti-bacterial and anti-fungal. Termite-proof, waterproof, fire-safe. 25-year unconditional guarantee plus 25 complimentary annual services.

What is SilverStone

Porcelain clay heated to 1,300°C, infused with silver and copper nano-particles. Anti-bacterial, anti-fungal, non-porous, stain-proof, scratch-resistant, impact-resistant, 100% food-grade (safe to eat directly off). Stronger than granite, more elegant than marble. Engineered, not mined — does not harm the environment.

Key phrase to remember

It looks like a stone, but it does not behave like a regular stone.

PART 2 · VERBATIM SOURCE MATERIAL (2 SECTIONS)

The sections of the master training document this module is built from — word for word, for reference and revision.

§1.3 — What is a Wellness Kitchen? (30-Second Pitch)

VERBATIM SCRIPT — use this exact wording

"Magppie Wellness Kitchens are made entirely from our patented sanitised stone — 0% wood. That means no trees are cut, and no harmful toxins like formaldehyde are released into your home. The stone contains real silver and copper nano-particles, making your kitchen naturally anti-bacterial and anti-fungal. It is termite-proof, waterproof, fire-safe, and comes with a 25-year unconditional guarantee plus 25 complimentary annual services."

§1.4 — What is SilverStone? (The Science — Simple)

VERBATIM SCRIPT — use this exact wording

"SilverStone is our patented wellness stone. We take porcelain clay, heat it to 1,300°C, and infuse it with silver and copper nano-particles. This makes it anti-bacterial, anti-fungal, non-porous, stain-proof, scratch-resistant, and impact-resistant. It is 100% food-grade — you can eat directly off it. It is stronger than granite and more elegant than marble. And because it is engineered, not mined, it does not harm the environment." Key phrase to remember: "It looks like a stone, but it does not behave like a regular stone."

PART 3 · VIDEO NARRATION SCRIPT (ENGLISH)

The narration for this module's video — readable now, listenable once the video is produced.

Magppie doesn't build kitchens from wood. It builds them from stone — and not stone you'd find in a quarry. SilverStone is engineered.

Here's how: porcelain clay, heated to 1,300 degrees Celsius, infused with real silver and copper nano-particles. That infusion is what makes the surface naturally anti-bacterial and anti-fungal.

The result is non-porous, stain-proof, scratch-resistant, impact-resistant, and completely food-grade. It's stronger than granite, more elegant than marble, and because it's engineered rather than mined, it doesn't carry the environmental cost that natural stone does.

Remember the line: it looks like a stone, but it does not behave like a regular stone.
