

Module 7

Ask Me Anything: Product & Material FAQ

Composition, comparisons vs. granite and tiles, and material properties.

Competency: Product Knowledge

Reading pack contents: module reading · verbatim source material · narration script

Ask Me Anything: Product & Material FAQ

Covers composition (porcelain + silver/copper nano-particles, baked at 1,300°C), comparison vs. granite (porous vs. non-porous), comparison vs. tiles (no grout lines, no mould accumulation), confirmation SilverStone is engineered not natural, weight/hardware load-bearing (100+ kg capacity, European-standard hardware), scratch/fire/water safety, food-grade status, and storage capacity.

PART 2 · VERBATIM SOURCE MATERIAL (31 SECTIONS)

The sections of the master training document this module is built from — word for word, for reference and revision.

§5.A Q1 — What is the composition of the stone? What is it made of?

SilverStone is a sintered stone made from porcelain, infused with nano-particles of Silver and Copper. This infusion makes it antibacterial, antiviral, stain-proof, and scratch-resistant. It has a density higher than granite and is completely non-porous. It is baked at 1,300°C under extreme pressure.

§5.A Q2 — What is the difference between your stone and granite?

Granite is a natural stone extracted from the earth. It is porous, absorbs stains and bacteria, and requires periodic polishing. SilverStone is a hygienic sintered stone that is non-porous, antibacterial, antifungal, stain-free, and extremely easy to maintain. It is stronger than granite and more elegant than marble.

§5.A Q3 — How does SilverStone compare with tiles?

SilverStone is a sintered stone infused with Silver and Copper ions and baked at 1,300°C. It contains no toxins, epoxy, or glue. It is heat-resistant, stain-free, stronger than granite, and more elegant than marble. Unlike tiles, SilverStone has no grout lines, so there is no accumulation of dirt, grease, or fungus. Mould and fungus cannot grow on SilverStone, whereas tile grout is prone to contamination.

§5.A Q4 — Is SilverStone a real stone? Natural or manmade?

SilverStone is an engineered stone — not a natural stone. It is made by baking porcelain clay at around 1,300°C with 60 other particles, then infusing it with silver and copper nano-particles. It looks like marble or granite but performs far better. We do not use natural stone because mining harms the environment, and natural stones are porous and prone to stains and scratches.

§5.A Q5 — How is the stone made?

The stone is made by heating porcelain clay at around 1,300 degrees. We add 60 other particles and infuse it with silver and copper nano-particles, which makes the entire stone bacteria-proof and food-grade. Food-grade means you can eat directly off the surface.

§5.A Q6 — Is it very heavy?

Stone is denser than compressed wood, so the base material is heavier. However, the cabinet structure is specifically designed to support this weight safely. Once installed, the weight is structurally balanced, so there is no impact on flooring or daily usage. The operations are actually smoother than a wooden kitchen because we use our patented hardware.

§5.A Q7 — Is it brittle or does it shatter easily?

No. SilverStone is even stronger than granite and does not break or chip easily. Even if you drop a heavy metal utensil on it, it will not break. It is completely impact-safe. We have tested this with heavy ceramic jar drops — the stone stays intact.

§5.A Q8 — Does the stone bend, warp, or sag over time?

No. SilverStone does not bend, warp, or sag. Unlike wood, it is dimensionally stable, meaning it stays exactly the same regardless of moisture, heat, or time. That's why shutters remain aligned even after years of use.

§5.A Q9 — Is the surface completely scratch-proof or scratch-resistant?

SilverStone is scratch-free under normal household usage — far superior to wood, laminate, granite, or marble. Regular chopping and knife work won't leave marks.

§5.A Q10 — Does the surface fade, chip, or lose its finish over time?

No. Periodic testing and years of rigorous use confirm that SilverStone does not fade, wear out, or lose its finish. That is why we offer a 25-year warranty on SilverStone cabinets and countertops.

§5.A Q11 — Is it fire-safe?

Yes. Because Magppie kitchens are made entirely from stone, the surface does not catch fire or help flames spread. It is safe around heat and open flame.

§5.A Q12 — Is it waterproof? Can I wash the kitchen?

Yes. SilverStone does not absorb water at all. We placed a wooden panel and a Magppie stone sample in water for 30 days. After a month, the wood swelled and weakened, while the stone stayed exactly the same. It does not absorb water, bend, or lose strength. However, the in-built lights are not waterproof — they are strategically positioned so they are not exposed to water during cleaning.

§5.A Q13 — Is it really food-grade? Can we eat directly on it?

Yes. SilverStone is a 100% food-grade stone. The silver and copper infusion prevents bacteria, making it hygienic enough to eat directly on.

§5.A Q14 — Does the kitchen require buffing or polishing?

No. Magppie SilverStone is completely maintenance-free and does not require any buffing or polishing. Simple wiping with a damp cloth keeps it looking as good as new.

§5.A Q15 — Can the hardware take the load of the stone?

Yes. Our kitchens use specialised patented hardware, manufactured in the same European facilities as Blum and Grass. The hardware has a load-bearing capacity of over 100 kg, ensuring smooth and durable performance despite the stone's weight.

§5.A Q16 — Are the hinges and channels rust-free?

Yes. All hinges and channels are rust-resistant and come with a 10-year warranty.

§5.A Q17 — What adhesives or chemicals are used?

We use weather-proof, non-toxic industrial sealants. There is no use of plywood glue, formaldehyde, or harmful chemicals. All materials align with our Wellness philosophy — safe for people and safe for the planet.

§5.A Q18 — Does it have more storage than regular kitchens?

Yes. With extra depth and height, Magppie wall cabinets offer up to 62% more storage than standard kitchens. They're designed to fit large Indian plates that usually don't fit in regular cabinets.

§5.A Q19 — Do you provide curved-edge borders on the countertop?

We provide precision chamfered edges to prevent accidental chipping while maintaining a clean, premium look.

§5.A Q20 — If edges get damaged, can they be repaired?

Edges are chamfered to minimise damage. In case of manufacturing or ageing defects, the affected section is replaced. Minor edge repairs are also possible on-site. Accidental damage is chargeable;

manufacturing defects are covered under warranty.

§5.A Q21 — If the countertop cracks accidentally, can it be replaced?

Yes, it is replaceable. However, accidental damage not related to manufacturing or ageing is chargeable.

§5.A Q22 — Are the in-built lights waterproof?

The lights are not waterproof, but they are strategically positioned so they are not exposed to water during cleaning, ensuring safety and long-term performance.

§5.A Q23 — Can we see an installation video?

Yes, we will be happy to share an installation video with you. We can send it over WhatsApp or email.

§5.F Q51 — Why choose SilverStone over granite?

SilverStone is an engineered upgrade over natural granite. Granite is porous — absorbs stains and bacteria. SilverStone is non-porous — hygienic and stain-proof. Granite varies in quality. SilverStone has uniform strength, finish, and performance. SilverStone is anti-bacterial and anti-viral, which granite is not. In short: granite is natural stone. SilverStone is next-generation stone.

§5.F Q52 — Why not use natural marble or granite?

Natural stones come from mining, which causes irreversible environmental damage. They are porous, harbour micro-organisms, and require periodic maintenance. SilverStone is completely toxin-free, non-porous, and requires zero maintenance. As a wellness company, we do not promote anything that harms Mother Nature.

§5.F Q53 — How do you compare with branded modular kitchens?

Commercially, we are at par with branded modular kitchens in pricing. But the material is completely different. They use compressed wood (below Rs. 100/sq.ft.) which contains formaldehyde, attracts termites, and absorbs moisture. We use SilverStone (Rs. 500/sq.ft. material cost) which is antibacterial, termite-proof, and maintenance-free. Plus, no branded wooden kitchen offers a 25-year guarantee with 25 annual services.

§5.G Q54 — Do you do only countertops and backsplashes?

No. We provide end-to-end Wellness solutions including cabinets, countertops, backsplash, and flooring. Handling only the countertop and backsplash defeats the purpose of our Wellness movement.

§5.G Q55 — Can you customise the design as per my needs?

We work with standardised modules to ensure quality and durability, while offering limited customisation to suit your functional and aesthetic requirements.

§5.G Q56 — Do you do sliding wardrobes?

We do not recommend sliding wardrobes. They are less durable as they operate on tracks and rollers that tend to misalign over time. Dust and moisture accumulate in the slider gaps, leading to faster wear. Misaligned shutters can be unsafe. We recommend openable shutters, which are safer, more durable, and easier to operate.

§5.G Q57 — Why not do the entire interior of the house?

We have expanded beyond kitchens and wardrobes to include vanities, flooring, wall cladding, and façades. Today, Magppie transforms homes into complete Wellness Homes. We are slowly expanding

so that in the future we can offer complete wellness interiors. Right now, our focus is on perfecting kitchens, wardrobes, flooring, and wall cladding.

§5.G Q58 — What all is included in your kitchen?

Every part is made from stone, inside and out: stone fascia (front shutters), stone backsplash, stone cabinets, stone shelves, and stone carcass.

PART 3 · VIDEO NARRATION SCRIPT (ENGLISH)

The narration for this module's video — readable now, listenable once the video is produced.

This module covers the questions customers ask most about the material itself.

What is it made of? Porcelain clay infused with silver and copper nano-particles, baked at 1,300 degrees. How does it compare to granite? Granite is natural, porous, and needs periodic polishing — SilverStone needs none. How does it compare to tiles? No grout lines means no place for mould or grease to collect. Is it heavy? Yes, denser than wood — but the cabinet structure distributes that weight, so there's no impact on flooring. Is it brittle? No — it's tested against heavy impact and stays intact.

These aren't edge-case questions. They're the ones nearly every serious customer asks in the first real conversation.
