

Module 1

Brand Foundation & Company Story

The mission, the one unified company story, and why Magppie positions as a wellness movement — with the exact no-variations wording.

Topics: company-story · mission-positioning

Reading pack contents: module reading · video narration script

Brand Foundation & Company Story

MISSION (VERBATIM — DO NOT ALTER)

Our mission is to transform ordinary homes into wellness homes. Spaces that keep you, your family, and the planet safe.

Magppie is not a kitchen company. Magppie is a Wellness Movement. We do not sell kitchens — we sell health, safety, and 25 years of peace of mind. Every conversation starts from that positioning, not from product features.

The company story — one version, no variations

SAY THIS (VERBATIM)

Magppie Group has been in business for over 50 years. For the past 20+ years, we have been creating kitchens and wardrobes. Our first SilverStone kitchen was installed in late 2016, giving us 9+ years of real-world performance validation. We are now expanding globally — we recently opened a store in Florida, USA, and won the Most Unexpected Innovation award at KBIS 2026 in Orlando, the world's largest kitchen show.

- ALWAYS lead: 50+ years group heritage → 20+ years in kitchens → 9+ years SilverStone.
- NEVER say: "35 years old", "40 years old", or open with "we were into stainless steel".

[CONFIRM YEAR] — UNRESOLVED CONFLICT

The AI Bot Master Training Document ("no variations") says the first SilverStone kitchen was late 2016. The Notion Brand Story (canonical founder narrative, full text received 2026-07-15) says the first stone kitchen was 2018 — an 11-year research journey that began with the founder's 2007 question, ending with an installation in a New Delhi home. Do not resolve this yourself — flag stays until leadership confirms. The quiz does not test the year.

Why material science was ignored in kitchens

Through 20+ years of building kitchens, Magppie saw the same failures repeat: most regular wooden kitchens have hidden issues — termites, mould, water sagging, and formaldehyde released from plywood and MDF. The industry kept selling finishes; nobody fixed the material. That is the gap SilverStone was built to close, and it is the story a Sales conversation is anchored on.

The Material Science story (Brand Story — canonical founder narrative)

Nature never makes mistakes: every material carries unique properties suited to specific applications — copper carries electricity, steel carries structural strength, glass carries transparency, and stone withstands heat, water, pressure and time. The principle: the right material in the right place creates the best performance. A car cannot be made from wood; a bridge cannot be built from paper.

The kitchen is not furniture — it is a food preparation laboratory, exposed daily to fire, steam, water, oil, heat, acids, heavy usage and food-contamination risks, operating 10–14 hours a day. Yet the material most commonly used worldwide for kitchen cabinets is compressed wood — particle boards, MDF, HDF, HDHMR, plywood — made from wood fibres, waste, glue, chemicals and resins. Wood was nature's fuel: the material traditionally used to create fire now surrounds the fire.

History already knew the answer: less than a century ago kitchens were built primarily from stone — naturally water-resistant, fire-resistant, durable, hygienic, long-lasting (temples and the Taj Mahal are stone). The challenge was never stone's performance; it was manufacturability and cost — stone has always been 5–7 times more expensive than compressed wood and hard to engineer, fabricate and commercialise at scale. Industrialisation chose easier and cheaper materials, not better ones.

Year | Milestone (per the Brand Story)

2007 — Founder Mr Vinod Jain asks: why can't we engineer stone to build an all-stone, zero-wood kitchen? An 11-year research journey begins.

2018 — World's first stone-built kitchen installed in a New Delhi home. [CONFIRM YEAR — the AI Bot doc says late 2016]

2021 — SilverStone: silver + copper infused via nano technology — world's first Wellness Kitchen; global patents acquired.

2023 — World's first Wellness Wardrobe — clothes touch skin daily; conventional wardrobes use particle board/MDF with chemical adhesives.

2026 — Global recognition at KBIS + Red Dot asserted by the Brand Story. [Award name and Red Dot carry flags — see Module 3]

The category this created: Wellness Interiors Systems — Wellness Kitchens, Wellness Wardrobes, Wellness Bath Vanities, and Wellness Surfaces for walls and floors. The closing frame: the future of homes will be defined by material intelligence, not decoration — as copper transformed electrical systems and silicon transformed computing, SilverStone transforms the spaces where we cook, live and thrive. Nature already chose the right materials; Magppie rediscovered them and engineered them for modern life.

PART 2 · VIDEO NARRATION SCRIPT (ENGLISH)

The narration for this module's video — the same voiceover you hear on the module page.

Before you sell a single kitchen, you need to know what Magppie actually is. Here's the surprise — it isn't a kitchen company.

Our mission is to transform ordinary homes into wellness homes. Spaces that keep you, your family, and the planet safe. Magppie is a Wellness Movement. We don't sell kitchens — we sell health, safety, and twenty-five years of peace of mind.

There is exactly one version of the company story, and it never changes. Magppie Group has been in business for over fifty years. For the past twenty-plus years, we have been creating kitchens and wardrobes. And our first SilverStone kitchen gave us nine-plus years of real-world performance validation.

Never say we're thirty-five or forty years old. Never open with stainless steel. One story, one order: group heritage, kitchens, SilverStone.

Through twenty years of building kitchens we kept seeing the same failures — termites, mould, water sagging, and formaldehyde from plywood and MDF. The industry kept selling finishes. Nobody fixed the material. That gap is why SilverStone exists — and it's the story every sales conversation is anchored on.
